Content	<p>COVID-19 pandemic represent emerging global problem and challenging condition that requires the world to cope all the efforts to overcome COVID-19 Crisis. General objective To assess knowledge, attitudes , and practices of medical Students towards COVID- 19 pandemic . Methodology: Cross sectional study, done in 31 university randomly, filled by 300 medical Students through online questionnaire , analyzed using SPSS . Results: : 90% thought that COVID-19 is a dangerous disease, 46.1% of them thought that it's mortality rate less than 20% , regarding the symptoms their Knowledge about shortness of breath , fever and headache was good , 80% of them knew general weakness , 80% cough , 30% running nose , 30% diarrhoea, and 20% thought it can occur without symptoms . Regarding mood of transmission, 53% know it is transmitted through respiratory droplets, 44% air prone transmission, 30% contaminated objectives and surfaces. 100% thought that older adults , and people who have serious underlying medical conditions might be at higher risk for severe illness from COVID-19 , while 40% thought that children have higher risk for severe illness. 100% of them wash their hands , 60 % maintaining distance from other people, 30 % wear a face mask in public and only 30% Committed to quarantin. 20% think it's just a poltical plot 87% of them get their informations about the disease from the social media. Recommendations: poor Knowledge, attitudes and practices, more health Education campaigns should be carried out.</p>
