## TUFH 2020 Abstracts

<b>Title</b>	<b>Coco Clinic</b>
<b>Type</b>	TUFH Oral Presentation
<b>Presenting Author</b>	Jesse Casanova
<b>Co-Authors</b>	Lynette Menezes, Asa Oxner
<b>Country</b>	United States
<b>Abstract N°</b>	TUFH540
<b>Content</b>	<p>Background: Since the onset of SARS-CoV2 (COVID-19) in Hillsborough County, our rates of infection have been on the rise. USF Health faculty, staff, and students have been on the frontlines in collaboration with the Florida Department of Health in Hillsborough (FDOH), Tampa General Hospital, and local healthcare providers to respond to this historic pandemic. Objective: The COVID-19 clinic has been designed in partnership between USF Health, FDOH, Tampa General Hospital to prevent unnecessary healthcare worker exposures, provide care inside the patients' home and is a meaningful learning experience for trainees. Methods: Two surveys are administered by medical students and residents to patients that have tested positive for COVID-19. The first survey establishes a baseline data to collect information and provide patients the opportunity for free telehealth consultation if needed. The second survey is a follow-up survey, where patients from the baseline survey are called back to ensure that care has been received and to provide additional telehealth if needed. All data is downloaded daily and shared with the FDOH and is used to create an online dashboard through Qlik, which will be used by FDOH. Results: More than 300 volunteer medical students and residents have called more than 2,600 patients for the baseline survey and over 1500 patients for the follow-up survey since April 3, 2020. Discussion: In addition, lines of research, which look at health disparities surrounding COVID-19 positive patients across the county, are being developed in a growing partnership with all stakeholders.</p>
